

Building Code Approvals

Model building codes set the standards relating to methods and materials used in United States building construction. In addition, model building codes conduct reviews of products to be approved for use in building construction.

The principle model building codes are the International Conference of Building Officials (ICBO), Building Official Conference of America (BOCA), Southern Building Code Congress International (SBCCI), and Metro-Dade. Following are copies of existing model code approvals for Siplast Lightweight Insulating Concrete Systems.

In addition, many local and city approvals exist for Siplast Lightweight Insulating Concrete Systems. Please consult your local Siplast Representative for local, city, and state approvals.
